Over ons

DSU is sinds de start in de jaren '70 uitgegroeid tot een onderneming, gespecialiseerd in de productie van deurrubbers en (magneet) afdichtingen op maat. Met onze producten bedienen wij de vervangingsmarkt voor deurrubbers en (magneet)afdichtingen in commerciële koelapparatuur en koelinstallaties

Altijd een passende oplossing

"Altijd een passende oplossing" dat is onze doelstelling. Met een assortiment van meer dan 200 verschillende types profielen is DSU de breedst georiënteerde producent van afdichtingen op maat in Europa. Kunt u het gezochte profiel niet vinden of twijfelt u? Stuur een duidelijke foto van de dwarsdoorsnede van het profiel per email of WhatsApp. Wij helpen u graag bij het vinden van het profiel of een passend alternatief.

Zoeken op merk

Selecteer het merk op onze website voor een lijst met de meest gebruikte profielen per merk.

Snelle levering

We beschikken over een eigen productie afdeling. Dit stelt ons in staat om deurrubbers

op maat snel te produceren. Onze reguliere doorlooptijd is 2 - 5 werkdagen. We bieden ook de mogelijkheid voor verzending op dezelfde dag. Hiervoor geldt een spoedorder toeslag van €10 per order. Voor spoedorders geldt: voor 12.00 uur besteld en een maximum aantal deurrubbers van 10 stuks per order.

Kwaliteit

Onze vakbekwame medewerkers produceren de afdichtingen met uiterste zorg en precisie zodat u bij de eindgebruiker een perfect passende deur-, en/of laderubber kunt plaatsen.

Wij werken uitsluitend met materialen van goedgekeurde leveranciers. Onze kwaliteitsborgingssysteem zorgt ervoor dat de kans op een productiefout tot een absoluut minimum wordt beperkt.

Serie productie

Productie van grotere aantallen dichtingen (50+) met dezelfde afmetingen kunnen we tegen aantrekkelijke prijzen offerreren. Neem contact op met onze verkoopafdeling voor een offerte.

Meer informatie op www.dsu-nl.com

About us

Since the start, in the 1970's, DSU has grown to become a company fully focused on the assembly of made-to-measure refrigerator and freezer door seals.

With our products we serve the replacement market for refrigerators and freezer door seals in the commercial cooling industry.

Always a suitable solution

"Always a suitable solution" that is our goal.

With an assortment of over 200 different profiles DSU is the supplier with the widest

assortment of made-to-measure PVC profiles in the European market.

Are you unable to find the profile you are searching for? Or do you have any doubts about the matching profile? Send us a photograph of the cross section via email or WhatsApp. We are glad to help you find the right profile or a suitable alternative.

Search by brand

Select the brand on our website for a list of commonly used profiles by brand.

Fast delivery

We have our own in-house production department. This enables us to produce made-to-measure seals prompt upon receiving your order. Our regular delivery time is 2 – 5 working days.

We offer the possibility for shipment on the same day. A surcharge of €10 per order applies. Rush orders must be received before noon (CET) with a maximum of 10 door seals.

Quality

Our competent employees assemble seals with utmost care and precision so you can place seals with a perfect fit at your customer. We exclusively utilize materials from approved suppliers. The chance of a manufacturing defect is reduced to an absolute minimum through our quality assurance system.

Serial production

Large numbers of seals (50+) with similar dimensions we can mass produce at attractive prices. Contact our sales department with your inquiry.

For more information visit our website www.dsu-nl.com

Über uns

Seit dem Start in den siebziger Jahren hat DSU sich auf die Herstellung von maßgefertigten Kühlschrank-, Kühlschrankblenden- und Kühlhaus-Dichtungen spezialisiert. Mit unseren Produkten bedienen wir den Ersatzteilmarkt für Kühl- und Gefrierschrank-Türdichtungen für Gastronomie und Kühlhäuser.

Immer eine passende Lösung

„Immer eine passende Lösung“, das ist unser Ziel. Wir sind in Europa der führende Hersteller mit den meisten schweißbaren Dichtungsprofilen für Gastronomie und Kühlhäuser. Zurzeit führen wir über 200 verschiedene Profile in unserem Sortiment.

Sollten Sie ihr Profil nicht finden? Oder haben Sie irgendwelche Zweifel? Dann schicken Sie uns ein Foto vom Querschnitt der Dichtung über Email oder WhatsApp. Wir suchen das passende Profil für Sie heraus und setzen uns dann mit Ihnen in Verbindung.

Suchen nach Herstellern

Wählen Sie die Hersteller auf unserer Website und finden Sie eine Liste der am häufigsten verwendeten Profile von Herstellern.

Schnelle Lieferung

Wir haben unsere eigene Montageabteilung. Dies ermöglicht es uns, prompt auf Ihre Bestellung, maßgefertigten Dichtungen zu produzieren. Wir versenden Ihre maßgefertigten Dichtungsrahmen, innerhalb von 2 – 5 Werktagen.

Eilaufträge die uns werktags bis 12 Uhr vorliegen, werden noch am selben Tag Versand. Für Eilaufträge berechnen wir einen Zuschlag in Höhe von €10 pro Order. Für eilaufträge gilt ein Maximum von 10 Dichtungen.

Qualität

Unsere kompetenten Mitarbeiter stellen die Dichtungen mit größter Sorgfalt und Präzision her, so dass Sie Dichtungen mit perfekter Passform beim Kunden installieren können. Wir verwenden ausschließlich Materialien von zugelassenen Lieferanten. Die Chance auf einen Herstellungsfehler wird auf ein absolutes Minimum durch unser Qualitätssicherungssystem reduziert.

Serienproduktion

Größere Anzahlen von Dichtungen (50+) mit ähnlichen Dimensionen können wir für Sie zu attraktiven Preisen in Serie produzieren. Kontaktieren Sie unseren Vertrieb mit Ihrer Anfrage.

Profielen die contra gelast kunnen worden

Bij contralassen wordt het profielen horizontaal gespiegeld. Het resultaat is dat bij profielen waar normaal de magneet aan de buitenkant zit, deze nu aan de binnenkant komt. De flap bij vlakprofielen is naar buiten in plaats van naar binnen.

Profiles which can be counter-welded

When you require the magnet of the profile to be on the opposite side, the seal must be counter welded. The flap of the flap profiles will be open to the outside instead of to the inside.

Profile die kontra-geschweißt werden können

Mit Kontra-Schweißen wird das Profil horizontal gespiegelt. Das Resultat ist das bei einem Profil mit den Magnet an die Außenseite jetzt den Magnet an die Innenseite positioniert ist. Die Klappe bei einem Flachprofil (Schraubprofil) ist nach der Außenseite offen statt nach der Innenseite.

Profielen met een speciale samenstelling

Als raam of op lengte verkrijgbaar.

Profielcodes met -MS in de naamgeving zijn gemaakt van een speciale P.V.C.-receptuur waarin rubber is verwerkt. Door deze speciale samenstelling blijven deze profielen soepel tot -60 graden Celsius. Deze profielen worden vaak toegepast in gekoelde werkbanken, snelkoelers, schokvriezers en lage temperatuur vriezers.

Profiles with a special composition

Available as frame or profile length.

Profile numbers ending with -MS are made of a special P.V.C. compound containing rubber. Due to the rubber component the material stays flexible till -60 degrees Celsius. MS profiles are often used in blast chillers, shock freezers and low temperature freezers.

Profile mit einer speziellen Zusammensetzung.

Verfügbar als Rahmen oder Profil Länge

Profielen mit -MS in die Benennung sind Profile aus ein speziellen P.V.C. Verbindung der Gummi enthält. Aufgrund der Gummi Komponente bleibt das Material flexibel bis -60 Grad. -MS Profile werden oft in Schockkühlern und Schnellfrosten eingesetzt.

In vier stappen een afdichting vervangen

- 1 Maatvoering bepalen
- 2 Profiel keuze
- 3 Bestellen
- 4 Montage

1 Maatvoering bepalen

Het nauwkeurig opnemen van de maatvoering is erg belangrijk. Bij een kleine afwijking kan het voorkomen dat het deurrubber niet (optimaal) past.

Tijdens het invoeren van een bestelling zijn de juiste maten belangrijk alsmede de manier waarop deze bepaald is.

De maat van een afdichting kan op drie manieren worden bepaald.

- A maat (buitenmaten)
- B maat (buitenkanalen magneten)
- C maat (indruk tot indruk)

De meest gebruikte manier is het inmeten volgens de grootste buitenmaten (A maat). Hierbij adviseren wij om de breedte en hoogte te meten als de afdichting nog in de deur of lade zit. De A maat is voor alle profielen toepasbaar.

Bij indrukprofielen is het ook mogelijk om van indruk tot indruk te meten (C maat). De C maat wordt ook wel de hart-op-hart maat genoemd.

Voor een correcte C maat wordt er gemeten van de buitenkant van de groef aan de ene kant van de deur tot de binnenkant van de groef aan de andere kant van de deur. (Deze maat komt overeen met de afstand tussen het midden van de groef aan de ene kant tot het midden van de groef aan de andere kant).

De B maat bepaal je door de afstand tussen de buitenkanalen van de magneetstrips te meten. Dit wordt ook wel magneet-tot-magneet genoemd.

2 Profiel keuze

Identificeer het profieltype met behulp van een dwarsdoorsnede van de afdichting. Hiervoor dient de afdichting te worden doorgeknipt of doorgesneden.

Zoek het juiste profieltype door de dwarsdoorsnede te vergelijken met de proefstukken uit de monsterkoffer of raadpleeg de tekeningen in deze brochure of op de website.

WhatsApp
+ 31 6 30 50 3000

Komt u er niet uit? Stuur ons een duidelijke foto van de dwarsdoorsnede van het profiel per email, WhatsApp of via onze website. Wij adviseren u dan het juiste profieltype of een geschikt alternatief.

Een stukje profiel meesturen met ons bestelformulier kan natuurlijk ook. Het bestelformulier vindt u op onze website.
www.dsu-nl.com/formulieren

Monsterkoffer

Voor de professionele koeltechniker is er een monsterkoffer beschikbaar met daarin meer dan 100 van de meest voorkomende PVC profielen. De monsterkoffer is te bestellen via onze website onder artikel nummer 8.99.99-1.

3 Bestellen

- Website www.dsu-nl.com
- E-mail verkoop@dsu-nl.com
- Fax 0413 269 068
- Post Pannebakerstraat 2, 5405 BP Uden
- Telefoon 0413 264 472

4 Montage

Voor de montage

- Haal de afdichting na ontvangst direct uit de verpakking.
- Houdt de afdichting altijd vast bij de hoeken om het uitscheuren van de hoeken en/of magneetbreuk te voorkomen.
- Leg de afdichting uitgevouwen neer.
- Laat de afdichting wennen aan de omgevingstemperatuur.
- Verwarm eventuele plooien (ontstaan door het transport of opslag) gelijkmatig met een föhn om deze te laten verdwijnen.
- Verwijder voorzichtig de te vervangen afdichting.
- Reinig de deur- en kastomtrek waar de dichting op sluit grondig. Gebruik een schone doek en Professionele reiniger (artikel 8.04.02.0).
- Ontsmet voor het plaatsen de deur- en kastomtrek waar de dichting op sluit met een goedgekeurd desinfectiemiddel (artikel 8.04.04.0). Middel 30 seconden laten inwerken en afnemen met een schone droge doek.

Fout

Montage

- Plaats eerst de hoeken van de afdichting en daarna de lange en korte zijden, dit om het uitrekken (langer worden) van de dichting te voorkomen.
- De verwerkte magneetstrips hebben direct na montage een minder sterke aantrekkingskracht, het duurt enkele weken voordat de magneet de maximale aantrekkingskracht weer zal hebben.
- Mocht een hoek tijdens montage inscheuren dan kan dit gerepareerd worden met secondelijm (art. nr. 8.02.01-0).

Goed

Als de dichting niet goed afsluit, controleer dan op de volgende punten

- Is het profieltype correct?
- Is de maatvoering correct?
- Is de deur of het deksel krom of scheel?
- Is er een contramagneet aanwezig in de kastrand?
- Wringt de afdichting aan de scharnierzijde? Zo ja, houdt dan de deur of het deksel tegen de kast zonder de scharnieren. Stel vervolgens de scharnieren opnieuw af.

Onderhoud

De levensduur van afdichtingen wordt verlengd door deze dagelijks schoon te maken. Vet en vuil krijgen zo geen kans het PVC aan te tasten. Vet zorgt namelijk voor uitdroging van het PVC waardoor dit hard wordt en zal gaan scheuren. Het schoonhouden van de afdichtingen is daarnaast ook belangrijk in het kader van de hygiëne en voedselveiligheid.

Algemeen

- Maak afdichtingen dagelijks schoon voor een optimale levensduur.
- Gebruik een schone zachte doek en Professionele reiniger voor afdichtingen van koelapparatuur (artikel 8.04.02.0) of een soortgelijk reinigingsmiddel op waterbasis.
- Andere dan de voorgeschreven reinigingsmiddelen tasten het pvc van de afdichting aan wat een negatieve invloed heeft op de levensduur.
- Gebruik geen scherp voorwerp om tussen de plooien schoon te maken, dit kan het deurrubber onherstelbaar beschadigen.

Schoonmaken

- 1 Verwijder eerst met een kwast zichtbare vervuiling zoals etensresten, kruimels etc.
- 2 Breng de Professionele reiniger voor afdichtingen van koelapparatuur (artikel 8.04.02.0) aan op de afdichting.

- 3 Laat het middel 30 seconden inwerken.
- 4 Neem de afdichting af met een schone droge doek, ook tussen de plooien. Bij ernstige vervuiling stap 2 tot 4 nogmaals herhalen.

Replace a seal in four steps

- 1 Take measurements
- 2 Profile selection
- 3 Order
- 4 Installation

1 Take measurements

Taking correct measurements is important when ordering made-to-measure door seals. There are three methods to determine the seal measurements.

- A size (Outside-to-Outside)
- B size (Magnet-to-Magnet)
- C size (Dart-to-Dart)

Outside-to-outside (A size) measurements can be applied for all door seals. We advise to take outside-to-outside measurements while the seal is still fitted in the door or drawer.

For dart type profiles it is possible to measure Dart-to-Dart (C size). In practice this means you measure the inside edge of the slot on one side to the outside edge of the slot on the other side. This equals the Centre-to-Centre measurement.

Magnet-to-Magnet is measured from the outside of the magnet to the outside of the magnet and is referred to as B size.

2 Profile selection

Identify the door seal profile by using the cross section of the seal. A cross section of the seal profile can be cut out from the top side of the door seal using scissors or a craft knife.

Identify the profile by using our door seal sample kit, this catalogue or our website.

If you are unable to find a matching profile, we are there to assist you. Please send us a clear photograph of the cross section via our website, email or WhatsApp. We will answer which profile to use or suggest a suitable alternative.

It is also possible to send a cross section of the old door seal by post along with our order form. The order form can be found on our website. www.dsu-nl.com/forms

Door seal sample kit

We have compiled a professional door seal sample kit for commercial refrigeration engineers. The sample kit contains over 100 of the most commonly used seal / gasket profiles. This sample kit can be ordered via our website article 8.99.99-1.

3 Order

- E-mail verkoop@dsu-nl.com
- Fax +31 413 269 068
- Mail Pannebakkerstraat 2, 5405 BP Uden,
The Netherlands
- Phone +31 413 264 472

4 Installation

Before installation

- Take the seal from the box upon receipt.
- Always hold the seal by its corners to keep the magnetic strip from breaking.
- Lay down the seal so it can adapt to its ambient temperature.
- Wrinkles and creases (through transportation) can be removed by gently warming the seal with a hairdryer if necessary.
- Gently remove the old seal from the door or drawer.
- Clean the door/drawer and the cabinet face. Use a clean cloth and Professional fridge seal cleaner (article 8.04.02-0).
- Disinfect the door/drawer and equipment surface with an approved disinfectant (article 8.04.04.0). Let it sit for 30 seconds and wipe dry with a clean cloth before placing the new seal.

Installation

- Always hold the seal by its corners to keep the corners from tearing and/or the magnetic strip from breaking.
- Right after installation magnetic seals can have less power of attraction. It can take several weeks for the magnet to reach the right power of attraction.
- If a corner breaks during installation this can be repaired by using superglue (art. nr. 8.02.01-0).

Check the following if the seal does not close or seal correctly after installation

- Check if the correct profile and measurements were ordered.
- Check that the door is not crooked or twisted.
- Does the cabinet face contain a counter magnet?
- Is the seal wrenched on the hinge side? Check if the hinges are properly installed.

Maintenance

The life span of a door seal will be extended when properly cleaned on a daily basis. With proper cleaning fat and dirt won't get the chance to affect the PVC material. Fat causes PVC to dry out and get brittle which causes it to rip easily. A clean seal is also important for general kitchen hygiene and food safety.

General

- Clean your refrigeration equipment seals daily for a maximum lifespan
- Use a clean soft cloth and Professional fridge seal cleaner (article 8.04.02-0) or a similar water based cleaning product.
- Other than prescribed cleaning product can damage the PVC which shortens the lifespan of seals.
- Do not use sharp objects to clean in-between the seals folds, this can cause irreparable damage to the seal.

Cleaning

- 1 Remove any visible dirt like crumbs etc. using a brush.
- 2 Apply Professional fridge seal cleaner (article 8.04.02-0) on the seal.
- 3 Let it sit for 30 seconds.
- 4 Wipe dry with a clean soft cloth, also between the folds. Repeat treatment until the seal is entirely clean.

Ersetzen Sie eine Dichtung in vier Schritten

1 Bemaßung aufnehmen

2 Profil auswählen

3 Bestellung

4 Montage

1 Bemaßung aufnehmen

Bemaßung soll sorgfältig aufgenommen worden damit bei der Montage keine Fehler auftreten. Es gibt drei Möglichkeiten Maß zu nehmen:

- A Maß (Größte Außenmaß)
- B Maß (Außenmaß Magnet)
- C Maß (Steckmaß)

für Jeder Dichtung kann man dem Größte Außenmaß (A Maß) anwenden. Wir empfehlen die A Maß auf zu nehmen, während die Dichtung noch in der Tür oder Schublade angebracht ist.

Für die Rahmengrosse des Steckprofils können Sie das Steckmaß (C Maß) ermitteln.

Das genaue C Maß (Nutmitte bis Nutmitte) in der Tür oder Lade wird gemessen von der oberkannte der eine Nut bis der unterkante der gegenüberliegende Nut.

Außenmaß Magnet (B Maß) wird von Außenseite zur Außenseite des Dichtungsmagneten gemessen.

2 Profil auswählen

Identifizieren Sie den Profil Typ mit Hilfe eines Querschnitts der Dichtung. Dazu muss die Dichtung geschnitten oder durchtrennt werden.

Wählen Sie das richtige Profil durch den Querschnitt der Teststücke aus dem Musterkoffer, zu vergleichen oder beziehen sich auf die Zeichnungen in dieser Broschüre oder auf unserer Webseite.

WhatsApp
+ 31 6 30 50 3000

Sollten Sie Ihr Profil nicht finden dann sind wir für Sie da. Bitte schicken Sie uns ein Klares Foto vom Querschnitt der Dichtung per Email, WhatsApp oder über unsere Webseite. Wir suchen das passende Profil oder eine geeignete Alternative für Sie heraus und wir setzen uns dann mit Ihnen in Verbindung.

Es ist auch möglich ein Musterstück von Ihrer alten Dichtung zusammen mit unserem Bestellformular zu senden. Das Formular können Sie auf unserer Webseite herunterladen. www.dsu-nl.com/formularen

Musterkoffer

Wir haben einen Musterkoffer für die professionellen Kältetechniker zusammengestellt. In diesem Koffer gibt es mehr als 100 Musterstücke von den meist genutzten Profilen. Diese Musterkoffer können Sie bestellen über unsere Webseite Artikel 8.99.99-1.

3 Bestellung

- Webseite www.dsu-nl.com
- E-mail verkoop@dsu-nl.com
- Fax +31 413 269 068
- Post *Pannebakkerstraat 2, 5405 BP Uden, Nederlande*
- Telefon +31 413 264 472

4 Montage

Vor der Montage

- Nehmen Sie die Dichtung sofort nach dem Erhalt aus der Verpackung.
- Halten Sie den Dichtungsrahmen an den Ecken fest, damit der Magnetstreifen nicht bricht.
- Legen Sie den Dichtungsrahmen auseinandergefalt flach hin damit er Umgebungstemperatur erreicht.
- Die Dichtungen werden für den Versand zusammengelegt. Eventuelle Transportfalten können mit einem Föhn wieder geglättet werden. ACHTUNG: Beim Verwenden eines Föhns darf die Dichtung nicht zu warm werden, sonst kann sie sich verformen und schmelzen.
- Die Alte Dichtung sanft von der Tür oder Schublade entfernen.
- Vor der Montage müssen alle Flächen gründlich gereinigt werden (Sowohl die Tür- als auch die Gehäuseumrandung, auf der die Dichtung aufliegt). Verwenden Sie ein sauberes Tuch und Profi-Reinigungsmittel für Dichtungen von Kühlgeräte (Artikel 8.04.02-0).

Falsch

- Desinfizieren Sie vor der Montage die Fläche, auf der die Dichtung montiert werden soll mit einem zugelassenen Desinfektionsmittel (Artikel 8.04.04.0). Mindesteinwirkzeit 30 Sekunden, trocknen mit einem sauberen Tuch.

Montage

- Halten Sie den Dichtungsrahmen an den Ecken fest, damit die Ecken nicht einreißen und/oder der Magnetstreifen nicht bricht.
- Die Anzugskraft von Magnetdichtungen ist kurz nach der Montage etwas geringer als üblich. Nach einigen Wochen hat die Dichtung der maximalen Anzugskraft erreicht.

Gut

- Eingerissene Ecken können mit Sekundenkleber repariert werden (Artikel 8.02.01-0).

Wenn die Abdichtung nicht gut schließt Kontrollieren ob die richtige Dichtung bestellt ist.

- Kontrollieren, ob der Deckel krumm oder verzogen ist.
- Gibt es eine Gegenmagnet im Gehäuseumrandung?
- Ist die Abdichtung an der Scharnierseite verzerrt? Kontrollieren Sie ob die Scharniere korrekt eingestellt sind.

Instandhaltung

Täglich gepflegte Dichtungen haben eine optimale Lebensdauer. Reinigung sorgt dafür das Fett und Schmutz keine Chance haben das PVC zu beschädigen. Fett ist die Ursache das PVC austrocknet und brüchig wird und dass es leicht zerreißt. Daneben ist eine saubere Dichtung wichtig für die allgemeine Küchenhygiene und Lebensmittelsicherheit.

Allgemein

- Kühlgeräte Dichtungen täglich Reinigen für eine maximale Lebensdauer.
- Verwenden Sie einen sauberen, weichen Tuch und Profi-Reinigungsmittel für Dichtungen von Kühlgeräte (Artikel 8.04.02-0) oder ein ähnlicher wasserbasierter Reiniger.
- Andere als vorgeschriebene Reinigungsmittel können das PVC beschädigen, was die Lebensdauer der Dichtungen verkürzt.
- Verwenden Sie kein scharfes Objekt zum Reinigen inzwischen den Falten, weil das zu irreparablen Schäden an der Dichtung führen kann.

Reinigung

- 1 Entferne Alle sichtbaren Schmutz wie Krümel mit einem Pinsel.
- 2 Dichtung einsprühen mit Profi-Reinigungsmittel für Dichtungen von Kühlgeräte (Artikel 8.04.02-0).

- 3 30 Sekunden einwirken lassen.
- 4 Wischen Sie mit einem sauberen, weichen Tuch, auch zwischen den Falten. Wiederholen Sie die Behandlung, bis die Dichtung völlig sauber ist.
